

Central to a desktop lifecycle management strategy is the need to automate and standardize the deployment of software. To achieve consistent deployment of line-of-business applications across the enterprise, IT administrators need a powerful but intuitive environment to standardize and customize application installers.

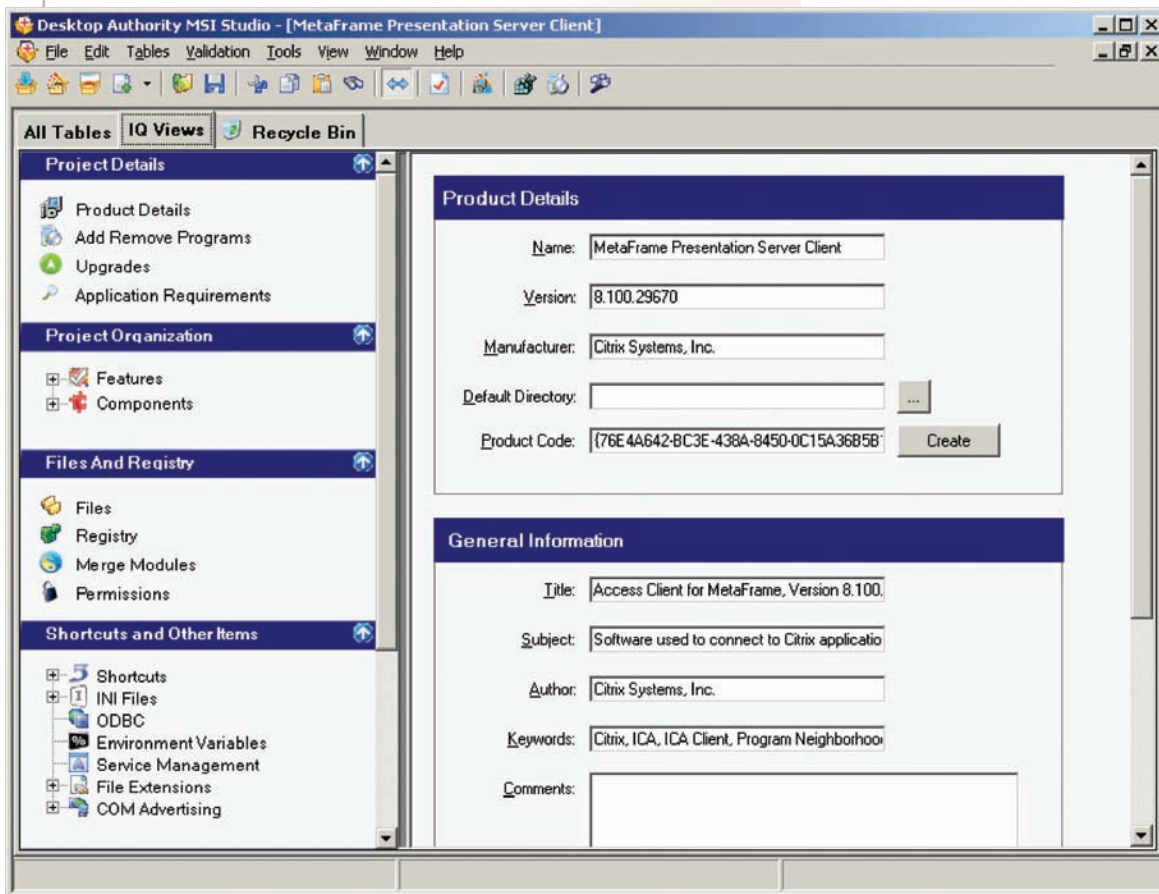

ScriptLogic's Desktop Authority MSI Studio is a comprehensive application packaging solution that lets administrators achieve the results they want from MSI-based application installers. Whether building an installer for a legacy application, modifying existing MSI installers, or customizing an unattended install by developing a response transform (MST), Installer Design Studio delivers dependable and consistent software installations.

PRODUCTIVE PACKAGING

Desktop Authority MSI Studio was developed with IT administrators in mind, guiding them through the task of packaging applications and tuning existing installers on a "reference" desktop PC using a set of wizards. MSI packages can be further customized using a number of different views, and then validated using "MCE validation"

– a faster, more reliable version of ICE validation. MCE not only informs the administrator of problems within a packaged application, but points them to the exact location of the problem within the MSI using a table view of the MSI file.

Desktop Authority MSI Studio centralizes every aspect of application packaging into a single, administrator-friendly, easy-to-use interface, making packaging an efficient and productive task.

KEY BENEFITS

- Standardized Desktop Environment**
With complete control over application installation, IT administrators can standardize the features provided to users, and avoid conflicts and unlicensed activity.
- Reliable Application Roll-out**
Application installers can be tested and validated with IDS before they ever touch a production desktop.
- Lower Desktop TCO**
Standardized, reliable applications reduce user down time, IT support costs, and the cost of desktop ownership.

KEY FEATURES

- Comprehensive Package Management**
Desktop Authority MSI Studio can package legacy applications into MSIs, repackage existing MSIs, create transforms (which customize the options during an installation) and even compare existing MSI packages.
- Centralized Intuitive Interface**
Desktop Authority MSI Studio uses a single simplified interface to package, edit, and build MSI and MST files.

- Faster, Reliable Validation**
Desktop Authority MSI Studio supports its own "MCE" validation technology, providing faster results with better accuracy than Microsoft's ICE, and guiding the administrator straight to the specific problem areas within the MSI table.

SYSTEM REQUIREMENTS

- Package Management**
Windows 2000 or later, .NET framework 1.1
- Package Deployment**
All versions of Windows that support Windows Installer.
(95/98/ME/NT/2000/XP/2003)

LICENSING

Each Desktop Authority MSI Studio license allows the product to be used by one administrator.
